

Allows to scale one or more objects according to the size difference between 2 objects taken for reference.

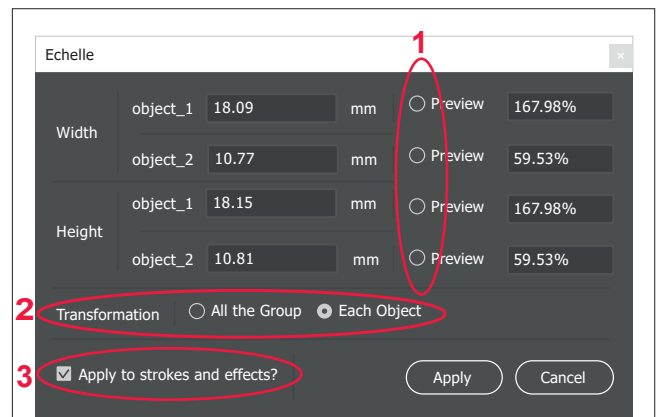

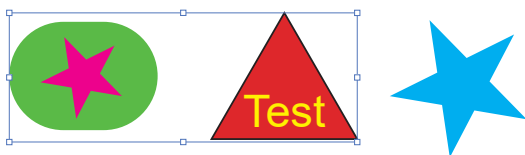

1. Select the 2 objects or groups that will serve as a reference. In the example below, these will be the 2 stars.

The selection must only include 2 distinct entities otherwise a message asking you to correct it will appear. If the selection is correct, a window and an alert will appear :

You are now prompted to select the objects to scale:

Now click on one of the preview options (1) to resize your selection according to the chosen percentage. With the help of the live preview, you can try the different options and settings (1), (2), (3).

In this example, if we check the first option, (167.98%), we obtain the result below where the 2 stars have the same dimension and the other objects of the selection have been resized according to the same proportion.
